1992 VITAL STATISTICS REPORT

PREPARED BY:

DEPARTMENT FOR HEALTH SERVICES
DIVISION OF HEALTH
SYSTEMS DEVELOPMENT
HEALTH DATA BRANCH
FRANKFORT, KENTUCKY

INTRODUCTION

The 1992 Kentucky Vital Statistics Report includes data on vital events occurring in Kentucky or to Kentucky residents in 1992. Tables in this report display data on resident births, deaths, and marriages and divorces. The report also includes a table on occurrence births and one on occurrence deaths.

Whenever rates are used, a distinction is made as to whether the rate is crude, age specific, or age adjusted. Age specific rates may apply to either a single age or to an age cohort. The age adjusted rate applies to death rates only. A definition of each type of rate is in the appendix section. Tables and charts are in the same order as the 1991 Vital Statistics Report.

The information in this report represents the only official source of vital statistics data in the Commonwealth of Kentucky. The data are collected from certified records of births, deaths, and marriages and divorces by the Vital Statistics Branch of the Division of Health Systems Development. The data are then supplied to the Division's Health Data Branch (State Center for Health Statistics) for publication. Because these data have wide circulation and use, many agencies will quote vital statistics data as if they were officially from their agency. Often the data have been changed to reflect a particular method of counting or calculating. The State Center disclaims specifically any and all responsibility for any analyses, interpretations, or conclusions which others may draw from these data.

There are two limitations with the data included in this report. The data are based on 1992 certificates that were received by the Vital Statistics Branch before April 7, 1993. Any 1992 certificates received after that date are not included in this report. Additionally, some data represent what was reported to the official data collector at the time the certificate was completed and are dependent upon the respondent's recall. An example of this type of limitation is the reporting on birth certificates of the actual trimester prenatal care began.

This report is organized into three major parts. The introduction, all narrative, and applicable analyses are located in the front of the report. The 1992 events are characterized and comparisons are made to previous years' data where applicable, and some comparisons are made among the regions. The second part is divided into three sections: births, deaths, and marriages and divorces. Each section is set up in two formats. The first format displays Kentucky data for 1992 and in some instances, previous years. The second format shows data for 1992 only, however the geographic coverage is more detailed. This format gives data for the Commonwealth, the Area Development Districts, and the counties within each district. The final part of the report is the appendix which contains population data, a glossary of vital statistics terms, a list of vital statistics rate definitions, and a grams to pounds and ounces conversion chart. Charts and graphs of various design have been included throughout the report.

The table formats displayed in this report are not an exhaustive representation of the various ways in which vital statistics data may be collated, nor is the maximum amount of detail provided. Requests for vital statistics data in formats or detail different from those provided in this report should be directed to the address or telephone number below. In addition, any relevant questions, comments, or suggestions pertinent to this report should be sent to the same address.

1992 BIRTH STATISTICS

BIRTHS

There were 53,655 resident live births in Kentucky in 1992, a decrease of .09 percent from 1991. The 1992 live birth rate was 14.4 per 1,000 population, compared to the national birth rate[1] of 16.0.

In 1992, resident white live births numbered 47,563 of which 10,306 were born to nonmarried mothers. Resident nonwhite live births numbered 6,092 with 3,845 to nonmarried mothers.

The live birth rate fell in eight of the 15 districts from 1991 to 1992, the largest decrease occurring in District 12 with a 6.8 percent change. The largest live birth rate increase was in District 2 with a percent change of 11.6. Districts 10 and 11 remained unchanged.

In all 15 districts the 1992 live birth rate was lower than the 1980 live birth rate. The largest decrease was in District 12 with a 27.4 percent change.

Christian County had the highest birth rate in the Commonwealth at 22.8, and Hickman County had the lowest at 7.5.

Resident stillbirths increased from 360 in 1991 to 377 in 1992.

Kentucky's fertility rate for 1992 was 61.9 per 1,000 female population ages 15-44 years. The national fertility rate[1] was 69.2.

TEENAGE MOTHERS

The teenage (ages 15 through 19) live birth rate was 63.3 live births per 1,000 female population, a decline of 4.7 percent from 1991. Births to mothers under the age of 15 occurred at a rate of 1.3 per 1,000 female population (ages 10-14).

The teenage (ages 15-19) live birth rate in 1992 was highest in District 8 with 83.3 live births per 1,000 female population 15-19. District 9 had the lowest rate at 46.8.

PRENATAL CARE

Over three-quarters of all mothers received prenatal care in the first trimester. Slightly over one-half of mothers under 15 years of age received prenatal care in the first trimester.

Married mothers were more likely to have received prenatal care during the first trimester than unmarried mothers by 85.0 percent to 64.7 percent, respectively.

White mothers were more likely to have received prenatal care during the first trimester than nonwhite mothers.

LOW WEIGHT BIRTHS

Slightly over eight percent of children born to mothers under 15 years of age weighed 2,500 grams or less. Overall, 6.9 percent of all live births were low weight births. Nonmarried women had a higher percentage of low weight births than married women by 9.8 percent to 5.8 percent, respectively.

MOTHER'S LEVEL OF EDUCATION

The percent of Kentucky mothers with 12 years of education in 1992 was 41.3. McCreary County had the highest percentage of mothers with less than 9 years of education, 20.4 percent.

Statewide, 14.7 percent of all mothers having a live birth had 16 years or more of education. Counties where over twenty percent of the mothers had 16 years or more of education were Boone, Campbell, Fayette, Jefferson, Jessamine, Kenton, Madison, Oldham, and Woodford.

MOTHER'S AGE

Of all live births, 32.3 percent were to women 20-24 years of age, and 27.7 percent were to women 25-29 years of age.

The proportion of births to older women, those 30 and older, increased from 15.7 percent in 1980 to 23.3 percent in 1992.

CONGENITAL BIRTH ANOMALIES

There were 1,101 birth anomalies in 1992 with a rate of 20.5 per 1,000 total live births. This was an increase of 4.6 percent from the 1991 rate of 19.6.

[1]Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 41/No. 13/September 28, 1993.

1992 DEATH STATISTICS

DEATHS

In 1992, Kentucky resident deaths totaled 35,010 with a rate of 9.4 per thousand population. This is higher than the national death rate[1] of 8.5 per thousand. County crude death rates ranged from a high of 14.4 in Fulton County to a low of 5.4 in Oldham County.

Of the total resident deaths, males numbered 18,296 with a rate of 10.2 per thousand. The number of female resident deaths was 16,714 with a rate of 8.7 per thousand.

From 1991 to 1992, the death rate increased in 6 of the 15 districts. The largest increase in the death rate took place in District 9 where the rate increased by 5.7 percent. Districts 10, 12, 13, and 15 remained the same.

In 5 of the 15 districts, the 1992 death rate was higher than in 1980. Since 1980, among these districts, death rates ranged from a 2.6 percent increase in District 5 to a 10.3 percent increase in District 12. Seven districts had a lower 1992 death rate than 1980. The largest decrease was 14 percent in District 7. District 2, 4, and 14 had the same rate as in 1980.

For most causes of death, the age specific rate was highest for residents 65 years of age and older. However, there were exceptions. The death rate from homicides was highest for residents in the 25-34 age cohort. Residents under six years of age showed the highest death rate for certain causes in early infancy, congenital anomalies, and symptoms and ill-defined conditions.

In 1992 there were 144 resident deaths from Acquired Immune Deficiency Syndrome (AIDS) with a rate of 3.9 per 100,000 population. This was an increase of 50 percent from the 1991 rate of 2.6.

INFANT DEATH

Kentucky's infant death rate declined from 8.8 per 1,000 live births in 1991 to 8.3 in 1992, or 5.7 percent. The national infant death rate[1] for 1991 was 8.5.

The 1992 infant death rate ranged from 3.2 infant deaths per 1,000 live births in District 1 to 14.0 in District 9. The 1992 infant death rate was lower than the 1991 rate in 8 of the 15 districts. In District 1, the infant death rate was down 62.4 percent. The rate in District 9 was 84.2 percent higher in 1992 than in 1991.

MATERNAL DEATH

There was one maternal death in Kentucky during 1992. This was a resident death in Jefferson County.

HEART DISEASE

The leading cause of death in Kentucky continued to be heart disease, accounting for 33.7 percent of all deaths (see Figure 2-I). The Kentucky death rate for heart disease, 318.1 per 100,000 population, was again higher than the national rate[1] of 282.5.

The crude rate for heart disease this year represented a slight decline from the 1991 rate of 323.0. The rate was highest during the years 1968 through 1973.

Heart disease was the leading cause of death in 107 counties when using the age adjusted rate comparison.

MALIGNANT NEOPLASMS

The crude rate of resident deaths from malignant neoplasms experienced a slight decline from the 1991 rate of 231.5 to 230.8 in 1992. However, the actual number increased by 39 deaths.

In 1992, 8,571 Kentuckians died from some form of malignant neoplasms. Respiratory and intrathoracic cancer was the primary cause in 35.3 percent of all cancer deaths, while cancer of the digestive organs was the primary cause of death in another 22 percent.

Malignant neoplasms were the leading causes of death in thirteen counties when the age adjusted rate is used for comparison.

CEREBROVASCULAR DISEASE

The crude rate of resident deaths from cerebrovascular disease was 62.6, the lowest it has ever been. This rate has declined yearly since 1980.

ACCIDENTS

The crude rate of resident deaths from accidents decreased from 43.5 in 1991 to 42.0 in 1992.

INFLUENZA AND PNEUMONIA

The crude rate of resident deaths from influenza and pneumonia decreased from 39.0 in 1991 to 36.5 in 1992. This rate has ranged from 22.6 in 1982 to 53.2 in 1963.

SUICIDE

The crude rate of resident deaths from suicide decreased slightly from 13.9 in 1991 to 13.8 in 1992. In 1990 this rate was at its highest level.

[1]Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 41/No. 13/September 28, 1993.

1992 MARRIAGE AND DIVORCE STATISTICS

There were 46,252 marriages in Kentucky in 1992, a rate of 12.5 per 1,000 total population. This represents a decrease from the 1991 rate of 12.9. See Table 3-A. The national marriage rate[1] for 1991 was 9.3. Of all counties reporting, the highest rate of marriage occurred in Henderson County with a rate of 41.9 while the lowest rate where a marriage occurred was in Letcher County at 4.7 per 1,000 population.

Kentucky had 22,111 divorces in 1992. The divorce rate of 6.0 per 1,000 population is slightly higher than the national divorce rate[1] of 4.8. In 1992, of all counties reporting, Logan County experienced the highest divorce rate at 14.4, while the lowest divorce rate occurred in Lincoln County at 1.0.

[1]Data from the National Center for Health Statistics, Monthly Vital Statistics Report/Vol. 41/No. 13/September 28, 1993.

COMPARISON OF NATIONAL AND KENTUCKY

VITAL STATISTICS HIGHLIGHTS

This table compares U.S. and Kentucky vital statistics for the years 1991 and 1992. The rate of birth was lower in Kentucky both years. The 1992 death rate decreased from 1991 at the state level, but remained the same at the national level.

The 1992 U.S. data are provisional and subject to revision. The Kentucky data are the final official data.

	NATIONAL		KENTUCKY		
	1992	1991	1992	1991	
Birth Rate	16.0	16.2	14.4	14.6	Per 1,000 Total Population

LIVE BIRTHS, DEATHS AND NET CHANGE*
KENTUCKY, 1960 - 1992

Year	Births	Deaths	Net Change
1960	72,018	29,909	42,109
1970	60,253	33,250	27,003
1980	59,550	33,765	25,785
1985	52,681	34,807	17,874
1986	51,776	34,788	16,988
1987	51,358	34,579	16,779
1988	51,035	35,571	15,464
1989	53,206	35,182	18,024
1990	54,041	34,971	19,070
1991	53,703	35,229	18,474
1992	53,655	35,010	18,645

* "Net Change" is the difference between live births and deaths. This is called "Natural Increase" in many statistical publications.

VITAL STATISTICS GLOSSARY

Birth Weight - The weight of a neonate determined immediately after delivery or as soon thereafter as feasible. It should be expressed to the nearest gram. This weight should be measured preferably within the first hour of life before significant postnatal weight loss has occurred.

Cause of Death - Deaths, by cause, are classified according to the International Classification of Diseases, Ninth Revision, of the World Health Organization.

Childbearing Age - Women 15 through 44 years of age.

Stillbirth (Fetal Death) - Death prior to the complete expulsion or extraction from the mother of a product of human conception, fetus and placenta, irrespective of the duration of the pregnancy; the death is indicated by the fact that, after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles. This definition excludes induced terminations of pregnancy.

Gestation Age - The number of completed weeks that have elapsed between the first day of the last normal menstrual period (not the presumed time of conception) and the date of delivery, irrespective of whether the gestation results in a live birth or a fetal death.

Infant Death - Any death at any time from birth up to, but not including, one year of age (364 days, 23 hours, and 59 minutes from the moment of birth).

Live Birth - The complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of the pregnancy, which, after such expulsion or extraction, breathes or shows any evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.

Low Weight Birth - Any neonate, regardless of gestation age, whose weight at birth is 2,500 grams or less.

Maternal Death - The death of a woman while pregnant or within 42 days after termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes.

Multiple Causes of Death - All those diseases, morbid conditions or injuries which either resulted in or contributed to death and the circumstances of the accident or violence which produced any such injuries.

Neonate - A liveborn infant.

Neonatal Death - Death of a liveborn neonate before the neonate becomes 28 days old (up to and including 27 days, 23 hours, and 59 minutes from the the moment of birth).

Perinatal Deaths - All fetal deaths of 20 or more weeks' gestation, plus deaths under 1 week.

Place of Occurrence - The place where the event occurred (regardless of place of residence).

Postneonatal Death - A death of an infant 28 days or more but under one year of age.

Race - The terms "white" and "nonwhite" are used to denote the racial groups. Definitions used for classifying race are those specified by the Bureau of the Census.

Residence Data - Data compiled according to the usual place of residence of the person to whom the event occurred without regard to the geographic place of occurrence. For births, infant deaths, and fetal deaths, the residence is defined as the mother's usual place of residence. (Resident data for Kentucky include events which occurred to residents of the Commonwealth irrespective of where the event took place.)

Total Births - The total number of deliveries, live births plus fetal deaths.

Underlying Cause of Death - The underlying cause of death is either the disease or injury which initiated the train of events leading directly to death or the circumstances of the accident or violence which produced the fatal injury.

VITAL STATISTIC RATES

Age Adjusted Death Rate = Total number of expected deaths in a standard population (if the persons in this population had experienced the same age specific death rate as the population being adjusted) x 100,000 / Total Standard Population (based on the 1970 U.S. standard population)

Age Specific Birth Rate = Number of live births to women in specific age group x 1,000 / Estimated female population in that age group

Age Specific Death Rate = Number of deaths in specific age group x 100,000 / Estimated population in that age group

Cause Specific Death Rate = Number of deaths from a specific cause x 100,000 / Estimated total population

Crude Birth Rate = Number of live births x 1,000 / Estimated total population

Crude Death Rate = Number of deaths x 1,000 / Estimated total population

Divorce Rate = Number of divorces and annulments x 1,000 / Estimated total population

Fertility Rate = Number of live births x 1,000 / Female population 15-44 years of age

Stillbirth Rate = Number of stillbirths x 1,000 / Total number of live births

Infant Death Rate = Number of deaths under 1 year of age x 1,000 / Total number of live births

Low Weight Birth Rate = Number of live births weighing 2,500 grams or less x 100 / Total number of live births

Marriage Rate = Number of marriages x 1,000 / Estimated total population

Maternal Death Rate = Number of deaths due to complications of pregnancy and childbirth x 10,000 / Total number of live births

Neonatal Death Rate = Number of deaths under 28 days of age x 1,000 / Total number of live births

Nonmarried Birth Rate = Number of births to nonmarried women x 1,000 / Total number of births

Perinatal Death Rate = Number of stillbirths and deaths under 1 week x 1,000 / Total number of births

CAUSE OF DEATH CODES

In tables 2-I, 2-J, and 2-N, data for selected causes of death are provided. The cause of death and relevant ICD codes are listed below. The source of the ICD codes is International Classification of Diseases, 1975 Revision, World Health Organization.

Cause of Death	ICD Codes
Heart Diseases	390-398, 402, 404, 410-416, 421-429
Malignant Neoplasms	140-208
Cerebrovascular Disease	430-438
Accidents	E800-E949
Influenza & Pneumonia	480-487
Diabetes Mellitus	250
Suicide	E950-E959
Nephritis & Nephrosis	580-589
Arteries, Arterioles, Capillaries	441-448
Septicemia	038
Cirrhosis of Liver	571
Hernia & Intestinal Obstruction	550-560
Emphysema	492
Homicide (Includes Legal Intervention)	E960-E978
Arteriosclerosis	440
Congenital Anomalies	740-759
Certain Causes in Early Infancy	760-779
Symptoms & Ill-Defined Conditions	780-799
Hypertension	401, 403
Other Infective & Parasitic Diseases	001-139

GRAMS TO POUNDS AND OUNCES CONVERSION CHART

Birth weight is replacing gestation period as an indicator of fetal mortality. Fetal mortality is the measure which indicates the likelihood that a pregnancy in a population group will result in a fetal death. Because of unfamiliarity with gram weights and a prevailing tendency to think in terms of pounds and ounces, a conversion chart is presented below for the convenience of the reader.

500 grams or less	=	Under 1 lb 2ozs
501 - 1,000 grams	=	1 lb 2 ozs - 2 lbs 3 ozs
1,001 - 1,500 grams	=	2 lbs 4 ozs - 3 lbs 4 ozs
1,501 - 2,000 grams	=	3 lbs 5 ozs - 4 lbs 6 ozs
2,001 - 2,500 grams	=	4 lbs 7 ozs - 5 lbs 8 ozs
2,501 - 3,000 grams	=	5 lbs 9 ozs - 6 lbs 9 ozs
3,001 - 3,500 grams	=	6 lbs 10 ozs - 7 lbs 11 ozs
3,501 - 4,000 grams	=	7 lbs 12 ozs - 8 lbs 13 ozs
4,001 - 4,500 grams	=	8 lbs 14 ozs - 9 lbs 14 ozs
4,501 - 5,000 grams	=	9 lbs 15 ozs - 11 lbs 0 ozs
5,001 grams or more	=	11 lbs 1 oz and over
